

CASE 03

The Lunar Relay

A space-station puzzle case

On the far side of the moon, a relay station has lost its link to home. Its backup transmitter needs a six-digit restart code. You have the beacon panel, a damaged transmission log and a maintenance map. Restore the signal one clue at a time. No science knowledge is required.

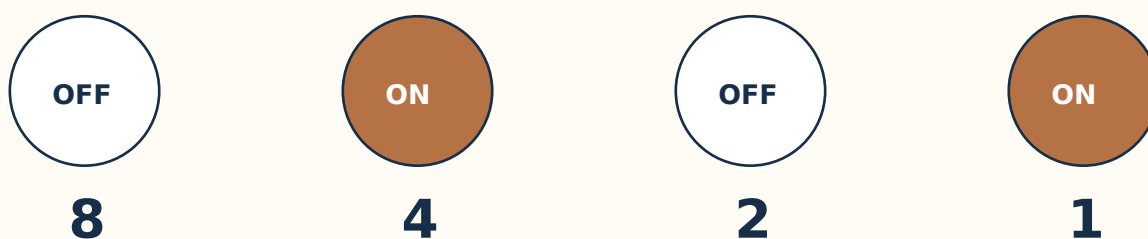

2 players or solo / Ages 14+ / 6 light puzzles

Print at actual size. A pen and paper are all you need. Keep the separate hint and answer guide closed until you want a nudge.

EVIDENCE 01

The Binary Beacon

The beacon stores a number using four lamps. Each lamp has a printed value. Lit lamps count; unlit lamps count as zero.

Add the values of the lamps marked ON. The total is your first code digit.

YOUR REASONING

DIGIT 1
